Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 June 2007.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 21, 22, 25-28 and 30-33 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 21, 22, 25-28 and 30-33 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. This Office Action is in response to the amendment filed 06/08/07. Claims 21, 22 and 25-34 are pending. Currently no claims are in condition for allowance.

Claim Rejections - 35 USC § 103

2. Claims 21, 22 and 25-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fayad et al. (US 6,757,250) in view of Mahler et al. (US 6,542,504 B1).

Regarding claim 21, Fayad discloses a method of negotiating maximal data compression of a modem relay channel, comprising:

determining a first maximal data compression on a first leg (gateway 306 can negotiate with modem 302 the selection of protocols (as known, compression is one of a common protocol type, further, see column 6, line 65-column 7, line 3);

determining second maximal data compression on a second leg (gateway 308 can negotiate with modem 304);

comparing the first maximal data compression and the second maximal data compression (gateways 306 and 308 are configured to engage into an exchange of capabilities (col. 11, lines 48-49);

selecting end-to end maximal data compression from the first and second maximal data compressions (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51));

Art Unit: 2616

renegotiating only an unselected one of the first and second maximal data compressions (column 8, line 54-column 9, line 2, column 13, lines 45-53; furthermore, it is inherent to renegotiating only an unselected protocol or rate in data communication system); and transmitting data using the end-to-end maximal data compression (information frames can be suitably passed from modem 302 to modem 304) (column 6, line 52-column 7, line 20; column 9, lines 35-50; column 11, lines 31-46) .

Further, Fayad discloses that both modem 302 and gateways support data compression in a data link protocol, such as V.42. As known, renegotiation is not allowed by V.42bis specification.

However, Fayad does not expressly disclose saving the end-to-end maximal data compression in memory.

Mahler teaches means for storing negotiated profiles and compression options (column 6, lines 5-9)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings for Mahler of saving the end-to end maximal data compression in the apparatus of Fayad in order to provide an efficient transmission system.

Regarding claim 22, Fayad discloses the method further comprising delaying negotiations on the second leg until a maximal data compression on the first leg has been determined (column 9, lines 46-50).

Regarding claim 25, Fayad discloses the method determining a maximal data compression on a first leg further comprising determining a maximal data compression on a

called leg (gateway 306 negotiates with modem 302 the selection of protocols), determining a maximal data compression on a second leg further comprising determining a maximal data compression on a calling leg (gateway 308 can negotiate with modem 304).

Regarding claim 26, Fayad discloses the method further comprising delaying negotiations on the calling leg until notification is received from the called leg (column 11 lines 31-37).

Regarding claim 27, Fayad discloses the method determining a maximal data compression on a first leg further comprising negotiating a maximal data compression on a calling leg and determining a maximal data compression on a second leg further comprising determining a maximal data compression on a called leg (column 11 lines 31-46).

Regarding claims 28 and 29, Fayad discloses, in figs. 3, 4 and 6, a network device, comprising:

a connector (306) to allow the device (302) to connect to a network (314) and receive a signal from a remote gateway (308) of maximal data compression on a remote leg (gateway 308 can negotiate with modem 304);

a dual first-pass negotiation mechanism to negotiate a first and a second maximal data compression capability for each of a first and second leg (gateway 306 can negotiate with modem 302 the selection of protocols and gateway 308 can negotiate with modem 304);

an end-to end compression capability determination mechanism to select and end-to-end maximal data compression capability from the first and second maximal data compression

Art Unit: 2616

capabilities (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51)); and

a second pass end-to-end renegotiation mechanism to renegotiate only one or more of the first or second maximal data compression to conform to the end-to-end maximal data compression capability (column 8, line 54-column 9, line 2; column 13, lines 45-53).

Further, Fayad discloses that both modem 302 and gateways support data compression in a data link protocol, such as V.42. As known, renegotiation is not allowed by V.42bis specification.

However, Fayad does not expressly disclose saving the end-to-end maximal data compression in memory.

Mahler teaches means for storing negotiated profiles and compression options (column 6, lines 5-9)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings for Mahler of saving the end-to end maximal data compression in the apparatus of Fayad in order to provide an efficient transmission system.

Regarding claim 30, Fayad discloses an article of computer-readable media containing a program (column 3, lines 18-28) that, when executed causes a computer to:

determine first maximal data compression on a first leg (gateway modem 306 receives a local call from modem 302; data link protocols such a V.42 and the like are suitably provided between modem 302 and gateway 306 , further, see column 6, line65-column 7, line 3);

Art Unit: 2616

determine second maximal data compression on a second leg (gateway 308 can negotiate with modem 304);

compare the first maximal data compression and the second maximal data compression (gateways 306 and 308 are configured to engage into an exchange of capabilities (col. 11, lines 48-49);

select end-to end maximal data compression from the first and second maximal data compressions (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51));

renegotiate only an unselected one of the first an second maximal data compressions (column 8, line 54-column 9, line 2; column 13, lines 45-53); and

transmitting data using the end-to-end maximal data compression (information frames can be suitably passed from modem 302 to modem 304) (column 6, line 52-column 7, line 20; column 9, lines 35-50; column 11, lines 31-46) .

Further, Fayad discloses that both modem 302 and gateways support data compression in a data link protocol, such as V.42. As known, renegotiation is not allowed by V.42bis specification.

However, Fayad does not expressly disclose saving the end-to-end maximal data compression in memory.

Mahler teaches means for storing negotiated profiles and compression options (column 6, lines 5-9)

Art Unit: 2616

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings for Mahler of saving the end-to end maximal data compression in the apparatus of Fayad in order to provide an efficient transmission system.

Regarding claim 31, Fayad discloses the program further inherently comprising storing the end-to-end maximal compression parameters (negotiation posture) in memory (column 11, lines 31-3).

Regarding claim 32, Fayad discloses the program further inherently comprising using the end-to-end maximal compression parameters stored in memory to prevent renegotiation by either the first leg or the second leg (column 11, lines 31-3).

Regarding claims 33 and 34, Fayad discloses, in figs. 3, 4 and 6, a network device, comprising:

a means for allowing the device to connect to a network (a communication with a second modem 304 through gateway 306; see fig. 3) and receive a signal from a remote gateway (308) of maximal data compression on remote leg (modem 304 negotiates with gateway 308 and gateways 306 and 308 are configured to engage into an exchange of capabilities of both modems 302 and 304);

a means for delaying data compression negotiations until the signal is received (column 11, lines 31-37);

a means for negotiating a first and second maximal data compression capability for each of a first and second leg (gateway 306 can negotiate with modem 302 the selection of protocols and gateway 308 can negotiate with modem 304);

a means for selecting an end-to-end maximal data compression capability from the first and second maximal data compression capabilities (gateways 306 and 308 are configured to engage into an exchange of capabilities and agree on the selection of protocols to be used with both modems 302 and 304 (col. 11, lines 48-51)); and

a means for renegotiating only an unselected one of the first or second maximal data compression based upon the end-to-end maximal data compression capability (column 8, line 54-column 9, line 2; column 13, lines 45-53); and

a means for signaling the remote gateway that negotiations are complete (column 8, line 1).

Further, Fayad discloses that both modem 302 and gateways support data compression in a data link protocol, such as V.42. As known, renegotiation is not allowed by V.42bis specification.

However, Fayad does not expressly disclose saving the end-to-end maximal data compression in memory.

Mahler teaches means for storing negotiated profiles and compression options (column 6, lines 5-9)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings for Mahler of saving the end-to end maximal data compression in the apparatus of Fayad in order to provide an efficient transmission system.

Response to Arguments

3. Applicant's arguments filed 06/08/07 have been fully considered but they are not persuasive. Applicant argues that Fayad does not teach *all limitation... and Fayad cannot render obvious the elements of one claim that performs both segment-by-segment negotiation and then harmonization. The embodiment of Fayad that performs modem renegotiation and selection of an end-to-end compression does not teach selection of independent first and second maximal compression as required by the first claim. The embodiment of Fayad that performs the selection of first and second maximal compression does not teach selection and renegotiation.* Examiner respectfully disagrees with Applicant contention. Fayad clearly discloses a modem-to-modem data communication through a packet network. Initially, gateway modem, 306, receives a local call from modem 302. Next, gateway 306 signal gateway 308 to contact modem 304. Modem 302 and gateway 306 start to negotiate a protocol (determining a first maximal data compression on a first leg). Independently and in parallel with these negotiations, gateway 308 and modem 304 conduct similar negotiations (determining a second maximal data compression on a second leg). Further, Gateways 306 and 308 are configured to engage into an exchange of capabilities and further agree on the selection of protocols to be used with both modems 302 and 304 (comparing and selecting an end-to end maximal data compression based on the first and second maximal data compression; see column 11, line 48-column 12, line 3). In addition, Fayad discloses that in the event the communication links between modem 302 and gateway 306 and between modem 304 and gateway 308 have negotiated different working parameters, exchanges of XID frames will occur until the working parameters are **harmonized** (see column 8, line 54-

column 9, line 7). Mahler assists in storing negotiated profiles and compression options. It is respectfully submitted that the pending claims as they currently stand read in the Fayad in view of Mahler.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Saba Tsegaye whose telephone number is (571) 272-3091. The examiner can normally be reached on Monday-Friday (7:30-5:00), First Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wing Chan can be reached on (571) 272-7493. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
